

Since September 2001, Camco SA has provided a wide range of services in the Civil and Building Industries.

Our experience includes:

Civil Infrastructure Construction

Land divisions
Pipelaying
Stormwater quality
Pumpstations
Concrete structures
Bulk earthworks
Urban Renewal
Road construction
National parks
Tactile installation

Property Maintenance Services

Glazing
Aluminium fabrication
Roof plumbing
Carpentry
Paving
Steel fabrication
Bitumen repairs
Fencing
All general internal & external repairs

Commercial Building Works

Internal fitouts
Building extensions
Large commercial buildings
DDA compliance upgrades

We would welcome the opportunity to further expand and discuss our experience, capability and capacity.

What's coming up?...

Bolivar WW Trunk Bridge Repairs, SA Water

Design and construct upgrade to the access bridge at Globe Derby Drive, Bolivar. The scope includes HAZOP, safety in design, detailed structural design, removal & replacement of existing handrails and minor concrete repairs.

East Avenue Traffic Devices, City of Unley

Construction of three pedestrian refuges/traffic calming devices along East Avenue and Leader Street Unley. The project scope includes the removal of existing concrete kerbing and bitumen pavement, construction of new concrete kerbing, pram ramps and paved in-fills.

Bolivar WWTP Midge Fly Project, SA Water

Design and construction of a midge fly management system at the Bolivar Waste Water Treatment Plant. The project scope includes the design and construction of a new grey water pump station, pipeline installation (1300m of 150mm oPVC) and installation of a travel irrigator.

Cardijn College Carpark Extension, Wallbridge & Gilbert

Construction of new 4000m2 bitumen carpark at Cardijn College, Noarlunga. The project scope includes the removal and recompaction of 1500m3 of in-situ fill material to level one standard, bulk earthworks, granular pavement construction, concrete kerbing and lighting.

Port Wakefield Road Slip Lane, Peregrine Corporation

Construction of a new slip lane off Port Wakefield Road into "On the Run" - demolition of existing kerbs and pavements, excavation to subgrade level, new deeplift pavement construction, kerbing, lighting and drainage.

Albert & Wellington Round Roundabout, CIC & Bluestone

Construction of a new roundabout at the intersection of Albert Road and Wellington Road. The project scope includes demolition of existing kerbs and pavements, excavation to subgrade level, new deeplift pavement construction, kerbing, lighting and drainage.

Ashley Street Drainage, City of West Torrens

Construction of approximately 500m of new stormwater drainage in West Street, Ashley Street and North Parade Torrensville. The project scope includes excavation, installation, backfill and reinstatement of new concrete stormwater pipe and precast drainage pits.

Scotch College Drainage, Scotch College

Construction of an on-site stormwater detention system to manage high flow levels from Scotch College. The project scope includes bulk earthworks, drainage pipework and detailed excavation and shaping of existing surface levels.

ABG-Bamboo Walk Reconstruction, DEWNR

Reconstruction of Bamboo Walk walking trail in the Adelaide Botanic Gardens. The project scope includes demolition of the existing kerbing and bitumen, excavation to design subgrade level, granular pavement construction and new concrete edge beam.

What's new at Camco?...

September 2015

"Welcome to the Spring edition of 'What's New at Camco'. Winter is finally behind us. I am not sure about you, but it seemed to be the longest, coldest and wettest winter I can recall – or it may just be me showing my age! Nevertheless, the recent drier and slightly warmer weather has been a timely reminder of what we can achieve on the ground when presented with favourable conditions. It also is a reality check that the Christmas season will be upon us before we know it.

In this edition, we have made a feature of our new look Facilities, Building and Maintenance Services (FBMS) team. Formerly known as "Minor works", we have taken the view that the majority of these projects, whilst often small in time or cost, are anything but minor! I hope you find it an interesting and informative read....**Chris Gould, Director**

In-house news...

Happy Birthday—this month we are delighted to be celebrating **Camco's 14th Birthday** and look forward to commencing our 15th year in the industry!

A big congratulations goes to our Site Manager **Devo Tait** and his wife Clareece on the safe arrival of their son, Orion Sebastian Tait.

Camco Management System/System Manager

During what seemed to be a very wet and cold winter, despite the obvious extra risks associated with such conditions, incidents remained at an all time low. Congratulations to all personnel for upholding the Camco core values of **innovation, passion** and **professionalism**, and for "doing what we say we will do every time."

The focus for the next quarter is on the hotter weather and the unique challenges this brings especially in terms of sun exposure during road works and other open areas such as land subdivisions. This will be introduced during October as part of the National Safe Work Month activities.

Also, as indicated in the last newsletter, the annual external QSE Audit was completed in June & we have since received the final report. Overall, the outcome was favourable with only 3 improvements identified. Of course, this does not mean we will sit on our laurels; Camco strives for continuous improvement & I look forward to reporting yet more positive outcomes in future newsletters. ...**Marco Puz**

The Inner Sanctum... it runs in the family

Malcolm Hurst (aka Macca)

Site Manager & little brother

Camco family member

Since... 2001

Successful achievements...

His 22 year old son

Loves...

Fishing, camping, gardening

Looking forward to... retiring

and spending more time up

the river

Best thing about working at Camco...

Not working Saturdays & of course the people

Carlene Hurst

Labourer & big sister

Camco family member

Since.. 2008

Successful achievements..

Two great kids

Looking forward to...

Winning the lotto!!!

Loves.. spending time with

family, relaxing & enjoying

an occasional drink :)

Best thing about working at Camco...

Working with such a great bunch of people

Professionalism

Passion

Innovation

What's news?...

Facilities, Building & Maintenance Services (FBMS) — Our minor works division has had a face-lift, it will now be referred to as FBMS which is more reflective of its significant place in the Camco business structure.

Our dedicated Facilities, Building & Maintenance Services Coordinator, **Vanessa Kenny**, who in consultation with the Project Managers, facilitates the process of FBMS from the initial client contact to the final sign-off for both planned works and unplanned break-downs. With careful planning and liaison with our experienced FBMS site managers **John Frosco**, **Phil Downes**, **Rob Grimbleby** and **Shaun O'Keefe** (specifically chosen for their strong skill set in building construction and maintenance), the process ensures that the works are carried out on schedule and that client expectations are met or exceeded. This dedicated approach to the management of Camco's FBMS programme is proving to be a great success.

Cleaning of the glass atrium at Tea Tree Gully TAFE

Tea Tree Gully Tafe—Cleaning of the Glass Atrium, Spotless

Camco were engaged to carry out the cleaning and sealing of the large-scale glass atrium located at the Tea Tree Gully Tafe campus. The atrium sits over the main entrance to the Tafe complex and has been subject to regular water leaks over the past 10 years. Our scope included cleaning both the internal and external surfaces, replacing several broken panes of glass, over sealing all of the aluminium joints and replacing up to 70% of the existing rubber seals. The project team had to overcome several logistical challenges to ensure the work could be completed to a high standard whilst maintaining zero safety risk to construction staff and campus users. Utilising abseiling techniques in lieu of large scale scaffolding, our site manager, Shaun O'Keefe, was able to complete the works in a shorter time frame and maintain relatively unrestricted access to all of Tafe's facilities. This type of ingenuity is typical of the highly experienced team we are able to provide in FBMS projects.

The wide scope of works that fall under the FBMS division is demonstrated on the opposite page, and if you would like a copy of our full FBMS Corporate Profile, please email Lorik@camco.com.au

ENGINEERING INSPECTIONS & REPORTS

Camco's team of in-house qualified engineers can provide technical advice on existing building condition surveys, new projects and feasibility options with 'market price' budgets. This advice can extend from a simple site inspection and discussion through to detailed reports and cost option feasibility reports.

TRAFFIC MANAGEMENT SOLUTIONS

Camco has extensive experience in all forms of traffic control devices ranging from large scale projects such as new roundabouts & intersection upgrades, to smaller scale projects such as traffic calming devices, 'blisters', wombat crossings, speed humps, driveway links and shared use paths.

BRIDGE REPAIRS & MAINTENANCE

Bridges and their substructures can become structurally unsound over time which can pose a threat to public safety and the longevity of the bridge structure itself. Camco's team of in-house engineers can provide design input to remedial works, or even design/construct a replacement bridge should the current structure no longer be serviceable. Our team of skilled construction workers also have a range of experience in concrete rehabilitation, corrosion protection and abutment scouring armouring.

DDA & ACCESS UPGRADES

The DDA (Disability Discrimination Act) is in place to ensure that people with a disability are treated fairly and equally. This applies to buildings, their related facilities and external surrounds being designed or modified in a way that does not impede their use in any way by people with a disability. DDA upgrades can range from access ramps, designated parking areas, compliant handraiding, wheelchair access, tactile indicator installations and compliant stair nosings (non-slip, high visibility). Camco has been engaged to construct many DDA upgrades to government buildings, private commercial facilities, railway stations, carparks and external grounds at educational facilities.

LANDSCAPE & PLAYGROUND REMEDIAL WORKS

Camco has had extensive experience in the maintenance, upgrading and new construction of various forms of external landscapes—both soft and hard. Our expertise includes the compliant construction of tree removal, garden beds, soft fall area upgrades (rubber and mulch), minor service trenching, brick paving (new and relay), irrigation, instant turf, moss rock walls, privacy screening and any general outdoor functional spaces.

CEILINGING & PLASTERBOARD

Camco is equipped to carry out repairs to existing ceilings (T-bar, plasterboard, rondo) & walls (ply, plasterboard, MDF). We can also construct new ceilings and walls including the placement of insulation & sisalation. All of our construction team hold scaffold and working at heights tickets to ensure no job is too challenging.

BLOCK & MASONRY WORKS

Overtime brickwork can deteriorate, become damaged and sometimes structurally unstable due to weathering and moisture attack. When mortar erodes and crumbles, it exposes the brickwork to issues such as damp penetration. Camco has the capabilities to repoint mortar joints, replace rusted lintel beams, replace damaged bricks and acid clean brickwork to restore it to its original appearance. Likewise with stone, we have vast experience in stone mason remedial works and new builds.

CONCRETE WORKS

Concrete works under the FBMS can be as minor as repairing a small crack in a pathway or grinding down concrete to prevent dangerous trip hazards; to larger and more complex projects such as refixing concrete coping to parapet walls, 'hammer' testing concrete structure to determine their structural integrity or recaulking control joints. Camco also has the capacity to construct new structural concrete such as footings or suspended slabs and non-structural, such as kerbs or footpaths. We have vast experience in surface coating such as epoxy and tint treatments on all types of surfaces.

INTERNAL FITOUTS

Camco has developed a wide range of skilled trades, both in-house and external contractors, that can successfully complete any type of fitout project. We have constructed new classrooms, kitchens, bathrooms, modifications to child care centre and new reception areas. Work can be a simple piece of joinery, a new access door, new commercial kitchens or fitting out an MP's office. We can cover all trades including electrical, data/communication, painting, carpentry (1st & 2nd fix), flooring (carpet, carpet tiles, vinyl, tiles), plumbing, mechanical, concrete works and glazing.

Other categories that fall under the FBMS are: stormwater drainage, stobie pole propping, signage installation & linemarking, roofing fencing, sheds & screens, demolition, retaining walls & gabion baskets, road & footpath repairs and erosion control works.
